

Sanitary Survey 101

Local Assistance Unit, Coaching for TUs program

Every Colorado public water system is subject to a sanitary survey every three to five years depending on the population served and type of water source (Article 11, Colorado Primary Drinking Water Regulations). Are you preparing for an upcoming sanitary survey or have questions about a recent sanitary survey?

During this two-hour training course operators will review the elements of a sanitary survey and gain an understanding of the deficiencies that may be identified. An operator will have the opportunity to get feedback on the applicability of each sanitary survey element as it pertains to his or her water system.

All participants will receive 0.25 training units upon completion.

Course Topics and Deliverables:

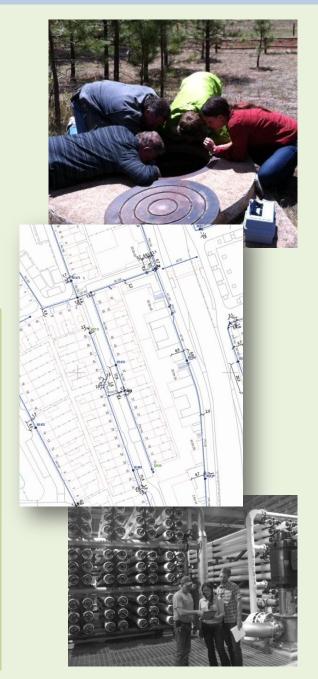

Sanitary Survey Overview

- Purpose
- CHPHE processing timeline

8 Elements of a Sanitary Survey

CBU Coaches will review each element of the survey, highlighting common errors and best practice techniques:

- 1. Monitoring, reporting and data verification
- 2. System management and operation
- 3. Water system certification and staffing
- 4. Source water evaluation and protection measures
- 5. Treatment facility processes
- 6. Adequacy, safety and reliability in distribution
- 7. Finished water storage
- 8. Pumps, pump facilities and controls
